

Abstract

The present invention relates to a method for processing sheet material, in particular papers of value such as bank notes, checks, etc., by which different groups of sheet material are processed successively, the different groups of sheet material being separated for processing.

It is proposed that not only a strict separating means but also at least one information means be used for separating and processing each group of sheet material. The separating means thus serves only to separate the individual groups of sheet material from each other, whereas the information means is used for providing information about the particular group of sheet material for processing.
